

JOHN CHARLES CURLEY - IRELAND
Solo Trans-Monterey Bay Marathon Swim
Age 40 at time of swim

Date: OCT 2-3, 2022

Course: A Single Crossing of the Monterey Bay as defined by MBSA course and rules.

Swim route chosen was North to South, from Harbor Beach to San Carlos Beach.

Straight Line Distance: 25.1 statute miles

Overall Swim Duration: 14h, 52m, 55s

START/FINISH	LOCATION	LATITUDE/LONGITUDE	TIME
Start	Harbor Beach, Santa Cruz	N36° 57.719', W122° 0.028'	20:23:20
Finish	San Carlos Beach, Monterey	N36° 36.574' W121° 53.694'	11:16:15

Observer 1: ROBIN ROSE **Observer 2:** AMY GUBSER

Boat & Captain(s): GREG GUBSER

Swimwear/Equipment: Standard porous suit (JAMMERS), single standard silicon swim cap, standard swim goggles, applied light coat of "grease" (50/50 lanolin and vasoline) to avoid chaffing, ear plugs, no watch.

Planned Course: Santa Cruz Harbor to Monterey (harbor to harbor)
25.1 STATUTE MILES, 40.3 KILOMETERS

Actual Course: SAME AS PLANNED

Final Swim Duration: 14 HOURS, 52 MINUTES, 55 SECONDS

Crew: Ger Kennedy

Feeding Plan:

(see attached)

Swim Category:

Unassisted Solo Marathon Swim

Rules

1. This swim was conducted following Marathon Swim Rules as defined by the [Monterey Bay Swimming Association](#). These rules are based on those used by CSA, CS&PF, SBCSA, CCSF. These rules are often collectively referred to as "English Channel" rules, however there are minor differences with the actual rules for swimming the English Channel.
2. This swim was conducted in the spirit of marathon swimming as described here: [Marathon Swimmers Federation](#)

Weather & Ocean Observations:

Light wind with some texture. Water ranged from 59f to 62.6f.

1-2 ft swell WNW and light winds ranging from 0-5 knots – mostly WNW.

Wind: WNW 0-5 knots.

Water Temperature (degrees Fahrenheit): 59f-62.6f

Air Temperature (degrees Fahrenheit): 55 overnight rising to 70 late afternoon. Mostly in low 60sf

Skies: Clear sky, waxing crescent moon

Currents: N/A

Jelly Fish/Wildlife:

Sea Nettles – stings reported, whale sightings (humpbacks), sea lions

Historical Claims:

This is believed to be the 11thth verifiable solo marathon swim across Monterey Bay.

Swimmer Narrative

By John Curley

On Sunday evening the 2nd of October at approximately 8:30 in the evening, I set off on my long swim across Monterey Bay. This was my 1st big international swim. What a swim to pick as first! As I entered the water, I had to dive through a couple of breaking waves and off I was. Not long after being in the water, approximately 30 minutes or so, I got hit hard by a tuna or a seal on my left forearm. We will never know what it was as I couldn't see anything in the dark. I'd be lying if I said this didn't rattle me a bit. A few minutes later after regaining my composure I was back on my way but not long before my 1st feed, I swam into a bunch of jellyfish and I was thinking to myself surely this can't be the whole way across Monterey Bay. As I finished my first feed, after 45 minutes I got myself composed again and set off again. For the next 9 hours and 1 minutes I swam in the pitch darkness, seeing only the fluorescents in the water and knocking into jellyfish and other creatures along the way. I didn't see any whales, but my boat informed me that the whales were on the other side of the boat. All I could do was smell them (knowing the smell of whale poo) and I was going to have to swim through it. Onward we went into the darkness never gave up.

At approximately 7:04 in the morning the sun came up and it was a relief to see a bit of brightness and land ahead of me. I was 12k from the finish. This was a long 12k. The brightness brought the surroundings into view, and I could see I was swimming through more jellyfish after jellyfish. They were in front of me, beside me, everywhere. I felt like I was swimming through the Serengeti. Approximately 2 hours from the finish, I spotted a shark off to the right of me. I kept plugging on.

Finally, I reached Monterey Beach (San Carlos Beach) and I was able to put my 2 feet down and walk out of the water. After 14 hours and 52 minutes, I felt emotional. It was a great achievement to have done and I was the FIRST Irishman to swim across Monterey Bay. In fact, I was also the first non-American to swim across the Monterey Bay. I also became the 4th fastest swimmer to have completed the swim.

In the middle of August, Ger Kennedy, my coach and swimming friend, told me I was up for the challenge. I asked what he had in mind. He said I could possibly swim the Catalina Channel, but he might have something else up his sleeve. I was more interested in what he had up his sleeve. He said to me later that Monterey Bay would be a massive achievement to have as my first international swim and I am very grateful that Ger took the risk and had the confidence to bring me over to San Francisco to let my dreams come true.

I would like to thank Ger Kennedy for believing in me, Robin Rose my observer for the long 14 hours and 52 minute swim, and Amy Gubser who was my support swimmer for the last 3 and ½ hours. Also thank you to Kim Rutherford who was on the beach when I first set off and when I arrived in Monterey. And of course, my pilot Greg Gubser, who without him the swim would not be possible.

Many thanks,
John Curley

Observer Narrative and Observations

By Robin Rose

As the sun was setting it became a very dark night on October 2, 2022 . Pilot Greg Gubser had his Mako boat ready for the long night at the Santa Cruz Harbor boat launch . Kim Rutherford, land crew, John Curley, swimmer, Ger Kennedy coach, crew, Amy Gubser crew, observer and observer Robin Rose all met at the boat at approximately 7pm.

The rules were read and Ger greased up his swimmer John with a combination of Vaseline , and Lanolin premixed.

Kim walked with John a few hundred feet down to the start at twin lakes beach to the left of the harbor in front of the Crow's Nest Restaurant.

We motored out of the harbor and greg positioned the boat ready for the swimmer to start. Count down 54321, Ger blew the whistle and John entered the water. There was some swell and John dove through a couple of waves. We could see his light on his goggles and hear his stroke in the water approaching the boat. John prefers swimming on the starboard side of boat , breathing to his left. The Mako boat is low enough to the water and a perfect boat to have direct eye contact and easy access to swimmer if needed .Although there was a crescent moon to start , the night sky was very dark on the ocean. John started off moving along in smooth water, with a stroke rate of 64 spm. About 30 minutes into swim John yelled out "F**king Hell!" as he was running into clumps of kelp and possibly some jelly fish. Right before John's first feed, he yelled out "OUCH!" He hit something very hard with his left arm. It could have been a fish, a sea lion or a piece of wood. It was so dark so we aren't sure, but John carried on. . Feed every 45 minutes was the plan. John had tonic water as part of some of the feeds as the quinine helps him stave off leg cramps. Stars began to become visible but the sky still early dark. John was very focused and stayed in a groove at approx 64 strokes and put his head down and swam and swam.

John and his coach Ger were very connected. During the feeds Ger would lean down and look John in the eyes and speak quietly and succinctly. John listened intently. It was a wonderful site to see the Coach swimmer relationship. John put all his trust in Ger, John was no nonsense and no fuss, quick feeds, just put his head down and swam on. About 3 hours into the swim Occasionally John would wander away from boat to the right a bit too far. Ger would shine the light and have John come back close to the boat.

There were lots of Jellies. Mostly sea Nettles which have a nasty sting. John would yell out expletives here and there when the Jellies became too much to bear. But John put his head down and swam on.

The conditions stayed approx 60-62 water with no wind and slight ripple . air approximately

John's training regimen was ideal for this swim with many training swims in cold waters of Ireland and swimming in the lion's mane jellyfish of Ireland as well. The conditions maintained a slight ripple and small swells throughout the swim. The currents became against him a bit that slowed John down for a few hours. About 5 hours into the swim there were whales abeam the boat on the port. humpbacks are very loud with their spouts. It was still dark and nothing to be seen off in the dark ocean except the

occasional squid boats and shooting stars!. At approx 6 hours John asked for the next feed to be warm. We were at the entrance to the canyon and the temperature of the water was dropping . Hot feed at hour 6 . Ger decided to switch to 30 minute feeds and warm from now on to keep John/s energy up. There were sea lions playing and jumping a lot behind the boat and swimming under and around John. It scared John for a moment. Ger went onto the bow of the boat to shine a flashlight on the sea nettles to give John a little warning of the upcoming jellyfish. John stayed up there for a couple of hours. The humpbacks came back at 7-8 hours into swim. The sea lions kept racing around the boat and causing lots of Bioluminescence under John. He smiled when we told him it was just sea lions playing. Humpbacks spotted 30 ears off port side and John said "It smells like whale" and lots of birds circling too.

Ger calls sea lions sea devils. At approx 8 hours into the swim the tide was pushing John back a bit. The current is against him. John still maintains a Jellyfish continue to haunt John there isn't a lot of reprieve from them, but other than "f**king jellyfish he swims on. John's spirits are a little low due to the long dark night full of the nettles. John is in good spirits when the sun starts to rise. Amy gets in to support swim with him at approx .

When the sun starts to rise, Ger puts up 2 Irish flash and a Dublin flag to represent our Irish swimmer. It was a wonderful site to see. The current is a little bit against John and although his stroke rate is up to 66 spm he is not gaining as much forward movement. John said it feels like he is swimming through the Serengeti of Jellies! Amy agreed to get in water to support John.

Amy went in as support swimmer at approx 715am. She is positioned between the boat and John on the starboard side of boat. This boosted spirits of John. John was an accomplice in Amy with the sea nettle stings. The sun was bright and was in the direct site of John and he was blinded by the light. So Amy repositioned herself and moved to John's right and John was closer to boat which blocks sun from John as well as keeps him close to boat. After almost of hour of support swimming, I reminded Ger that our rules are different than some other swim associations in that Amy can continue support swimming with John as long as she doesn't swim the entire distance of swim. So Amy agreed to stay in and it really helped boost John's spirits. (Amy ended up staying in until the finish of the swim!) At approx 12 hours into the swim the wind picked up and was approx 5k coming from NW. there was also a small swell 1-2 ft. There were cross swells and shifting wind and fumes coming into John face. Greg shifted boat and positioned so fumes weren't in swimmer's face.

John said the stingers on my F##king nose! Greg has expert piloting skills and knows his boat inside and out. Greg maneuvered the boat again due to the increasing wind the exhaust was coming from behind in the swimmer's face. Greg quickly maneuvered the boat. At about 13.5 hours the tide picked up in swimmers favor . only for about half an hour until the long shore current coming across the shore pushed against us to slow swimmers down. But John and Amy keep their heads down and swim.

At 45 minutes before finish, Ger got in to eddy swim with John . It was a wonderful site to see of camaraderie of the 3 swimmers in a row with John up ahead a few feet. Ger gave John a treat he had in his swimsuit, some Gu to help him to the finish. Kim Rutherford was on the beach waiting for them. The Mako guided them toward a jetty and all three swam avoiding rocks and scuba divers. John reached land ahead of the

support swimmers and landed at 11:16:15 on October 3! He became the first Irish Swimmer and first International swimmer to cross the Monterey Bay!. Huge Congratulations to John AND crew!

TEMPS IN FARENHEIT. DISTANCE IN STATUE MILES. WIND IN KNOTS. WAVES IN FEET.

18 hour 15 mins	warm Carbo drink	

John Charles Curley - Monterey Bay Swim (45 minute feeds)

Feed Groups and options for swaps

Quicker digested CHO	Slower digested CHO	Protein (every 3hours)

- Swap feeds for a similar option (same group) if flavor fatigue
- Aim for 30-35g CHO per feed
- Alternate quick and slow release drinks
- Add sugar for boost (esp. if cold) or extra gel
- If he asks for something... tell him that you can get it for the next feed, or the one following... if it isn't urgent. Don't have him waiting around.
- Most feeds take about 5 - 10 minutes to prep. Ensure enough people to take over if anything needs to be addressed.
